Launch and Recovery System

Fairlead manufactured a complex hydro mechanical assembly approximately 12 feet in length designed to stow, launch, and retrieve variants of the AQS-24 to support unmanned mine hunting operations.

Fairlead's LARS on display at the 2018 Sea-Air-Space Expo in National Harbor, MD

The LARS is comprised of multiple aluminum weldments and highly machined components fabricated and integrated. Final machining on LARS unit incorporating a surface profile of .003 maximum restrained inspected deviation .001 across the entire 179.00" long bolted-together monorail.
