## Littoral Combat Ship (LCS) Mine Counter Measures (MCM) Mission Modules

*In 2016, All Manufacturing & Integration of the LCS MCM Mission Modules, as a first tier subcontractor to Northrop Grumman Corporation.*

The LCS Mine Counter-Measure module is comprised of five different Mission Modules that consists of low-weight, high-strength steel containers that store, restrain, and house high precision electronic sensors and equipment used in the various ship missions.

Fairlead outfitted containers with custom designed and manufactured aluminum equipment cradles, storage racks, articulating dollies and trays.

The more advanced module systems consist of electromechanical motors to allow for efficient removal and replacement of weapons system sensors and equipment.

Additionally, electrical power and data connectivity supports mission system performance by integrating these complex systems in a straightforward configuration to the two LCS Variant platforms.
